WEB DESIGN PROJECT REPORT

HTML and External CSS – Practical Website Designs

Student Name	SIGATAPU SAI NAGA SAMPATH
Roll Number	26000057
Course	B.Tech – Computer Science and Engineering
Project Topics	Personal Portfolio, Food Ordering, Ticket Booking

Introduction

This report presents three beginner-level website interface designs created using HTML and external CSS. Each page demonstrates basic webpage structure, text formatting, form elements, buttons, and CSS styling. The screenshots below show the output of each design, followed by a short summary.

Objectives

• Understand how HTML elements are used to build webpage content.

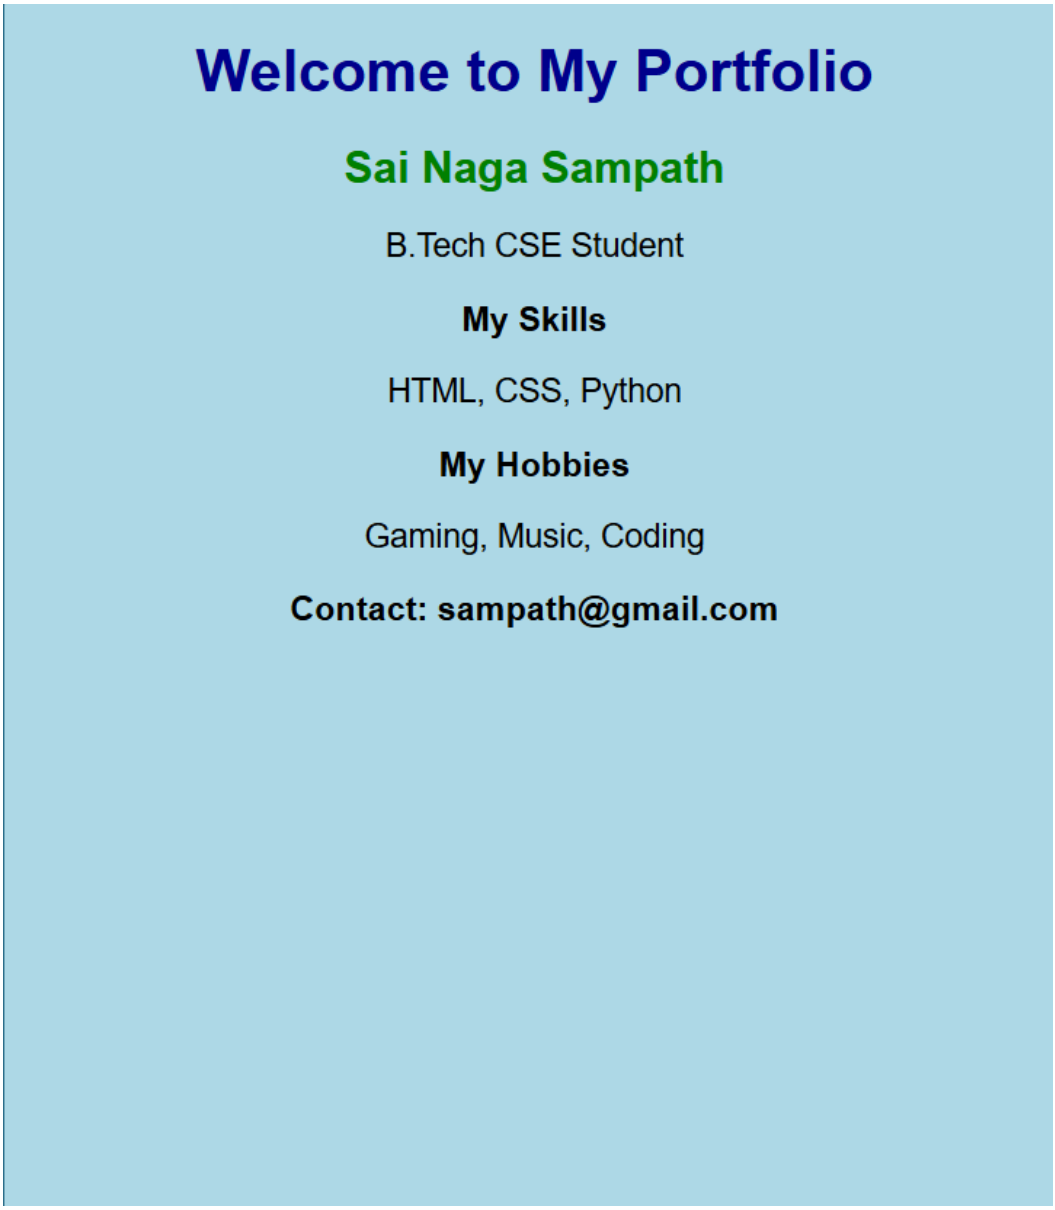

• Connect an external CSS file using the link element.

• Apply simple colors, spacing, alignment, and card-style layouts.

• Create basic interfaces for a portfolio, food menu, and travel booking form.

1. Personal Portfolio Website

Screenshot / Output

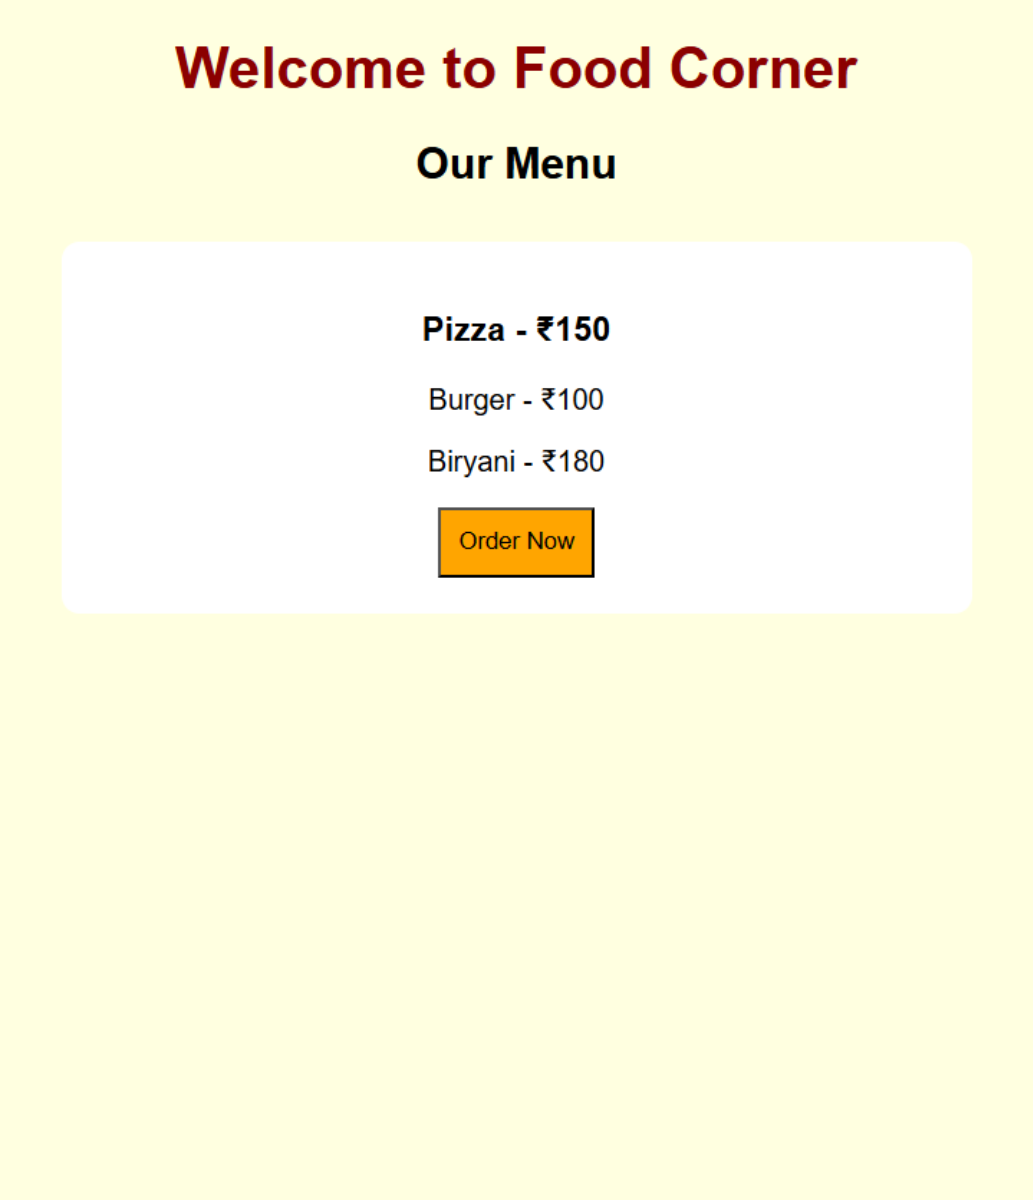

Summary

This page introduces the student with a name, course, technical skills, hobbies, and contact information. The light-blue background and centered text make the layout simple and easy to read. External CSS is used to style the headings, text, and page background.

2. Online Food Ordering Website

Screenshot / Output

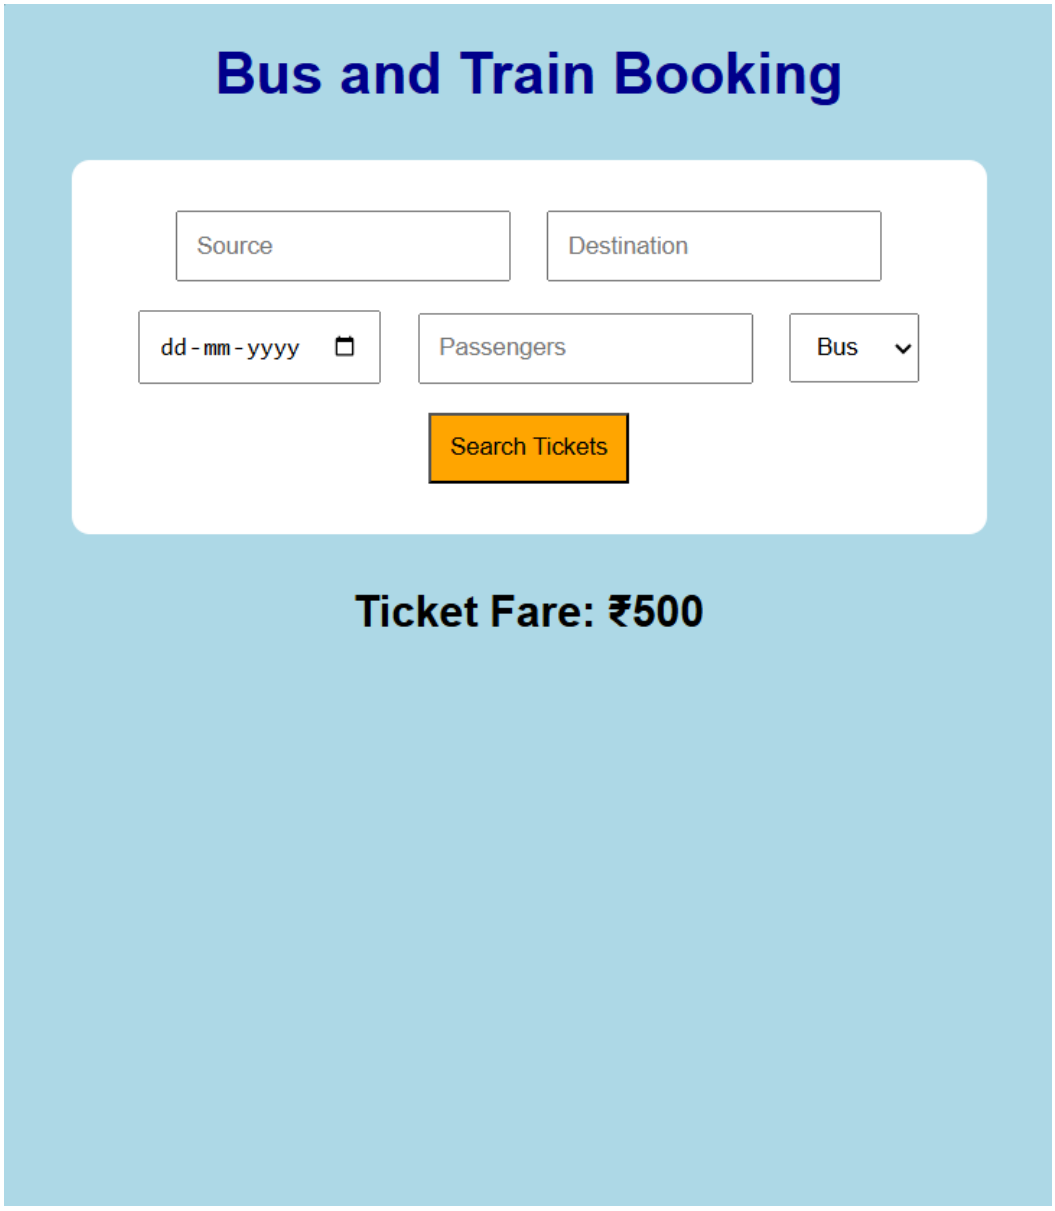

Summary

This page displays a simple food menu with Pizza, Burger, and Biryani along with their prices. A clear “Order Now” button is provided for the user. The light background, white menu card, and spacing help organize the food items.

3. Bus and Train Ticket Booking Interface

Screenshot / Output

Summary

This page provides fields for source, destination, journey date, passenger count, and transport type. The “Search Tickets” button represents the booking search action, and the fare is displayed below the form. The white form card stands out against the light-blue background.
